Linux User Management

Create User

- useradd
    - Native binary compiled with the system
    - Creates only a user by default (you have to use switches) to specify home directories and other settings
- adduser
    - Perl script which uses `useradd` among others
    - More user friendly and interactive
    - Creates a fully functional user on the system by default

Groups

Create Group

```
groupadd examplegroup
```

Add user to group

```
usermod -a -G examplegroup exampleusername
```

```
adduser exampleusername examplegroup
```

```
gpasswd -a exampleusername examplegroup
```

Remove user from group

```
gpasswd -d exampleuser examplegroup
```

Change user's primary group

```
usermod -g groupname username
```
